  • 4 Community ALC-3202AN loudspeaker controllers
  • 10 Desono ENT212 loudspeakers
  • 16 Desono EX-S8 loudspeakers
  • 1 TesiraFORTÉ AI digital audio server

BattleBots, the hit Discovery Channel show that features robot competitors fighting to the death in a 48’ x 48’ arena, decided to expand their appeal by building a venue that allows live audiences to attend the televised competitions. The BattleBots arena — part of Caesars Entertainment Studios — has a seating capacity of approximately 1,000 spectators.

Keith Wright, former BattleBots general manager and current senior director of project operations with technology solutions provider PSX, was instrumental in the decision-making process that led to the selection of Biamp loudspeaker solutions for the new venue.

The audio quality delivered by the Biamp system is a huge part of the live BattleBots experience; it greatly enhances the excitement.

RICHARD ROSS
Lead Audio Engineer
BattleBots
Technology solutions provider PSX, under Keith Wright’s direction, recommended a range of Community and Desono loudspeakers, plus a TesiraFORTÉ AI digital audio server.

The equipment is installed throughout the BattleBots entertainment facility, including the arena, VIP section, souvenir shop, and lobby.

Richard Ross, the lead audio engineer at BattleBots, worked closely with Keith to ensure that the specified system delivers an extraordinary audio experience for the live audience, and provides the proper coverage and intelligibility for announcements to be heard clearly across all venue sections.

According to Ross, the Biamp solution provides exceptional speech intelligibility and powerful audio output that helps pump up the crowd during live competitions. “The audio quality delivered by the Biamp system is a huge part of the live BattleBots experience; it greatly enhances the excitement,” he said.
