#### I SERIES

Subwoofer 800

# **IS8-115**

HIGH POWER SINGLE 15-INCH SUBWOOFER

#### APPLICATIONS

SMALL TO MEDIUM SIZE VENUES

Houses of Worship · Auditoriums · Restaurants Meeting Rooms · Theaters · Corporate A/V Systems

#### LARGER SIZE VENUES

 $\label{eq:arease} \begin{array}{l} \mbox{Arenas} \, \cdot \, \mbox{Stadiums} \, \cdot \, \mbox{Night Clubs} \, \cdot \, \mbox{Theaters} \\ \mbox{Themed Entertainment} \, \cdot \, \mbox{Larger Houses of Worship} \end{array}$ 

#### DESCRIPTION

I SERIES Subwoofer 800 loudspeakers provide exemplary acoustic performance, modular flexibility and elegant aesthetics for modern performance venues. Designed to support the goals of systems integrators and consultants both acoustically and mechanically, I SERIES Subwoofers provide a broad range of sizes and capabilities that can be specifically matched to the needs of any modern venue.

The compact, low-profile single driver I SERIES subwoofers are ideal for distributed or concealed sub-bass and are the perfect choice for ground stack applications. Additionally, each cabinet was carefully designed to provide matching face widths and suspension point locations for seamless integration into flown arrays with I SERIES full-range models when additional LF extension is needed but a compact appearance is required. The broad range of optional low profile fly rails, fly frames and modular array brackets reduces design and installation time while also providing improved aesthetics and nearly limitless integration possibilities.

The IS8-115 is a compact, direct radiating subwoofer with large, balanced ports that provide optimal enclosure tuning and even air pressure distribution to the driver cones, reducing distortion and extending system longevity. FEA optimized linear suspensions and high flux neodymium motors with long linear excursion capabilities provide exceptionally deep bass for the enclosure's diminutive size.

#### FEATURES

- High-flux, linear neodymium motors with demodulation rings for very low distortion
- Matched-size enclosure and aligned suspension point for seamless flown array integration
- 1000W continuous power handling (4000W peak)
- + Long, linear excursion ensures deep, clean bass extension at maximum output
- · Isolated driver air volumes allow use of directional steering techniques within a single enclosure

<b>TECHNICAL SPECIFICAT</b>	IONS <sup>1</sup>			
Operating Mode	Single Amp			
Operating Environment	Indoor or Weather-Resistant Outdoor			
Operating Range <sup>2</sup>	36 Hz to 155 Hz			
Transducer	1 x 15" (381mm) double-treated cone with 4" (102mm) voice coil, demodulation ring, neodymium construction			
Continuous Power Handling <sup>3</sup> @ Nominal Impedance	Single Amp	89V	1000W @ 8 ohms (4000W peak)	
Nominal Sensitivity <sup>4</sup>	Half Space Whole Space	@ 1W 99 dB 93 dB	@ 2.83V 99 dB 93 dB	
Nominal Maximum SPL <sup>5</sup>	Half Space Whole Space	Peak 135 dB 129 dB	Continuous 129 dB 123 dB	
Equalized Sensitivity <sup>6</sup>	Half Space Whole Space	@ 1W 97 dB 91 dB	@ 2.83V 97 dB 91 dB	
Equalized Maximum SPL <sup>7</sup>	Half Space Whole Space	Peak 133 dB 127 dB	Continuous 127 dB 121 dB	
Recommended Amplifiers	Single Amp	1000W - 2000W @ 8 ohms, (89V - 126V)		
PHYSICAL				
Input Connection	(2) Screw terminal blocks (4-position)			
Mounting Points	(24) M10 threaded rigging points Indoor; (22 in Outdoor model)			
Environmental	Outdoor: IP55W per IEC 60529 , MIL-STD-810G			
Weight	72 lbs (32.7 kg) subwoofer only			
Dimensions H x W x D	19.80" x 16.50" x 23.35" (503 x 419 x 593 mm)			
Finish	Refer to the Technical Drawing			
OPTIONS				
Accessories (Refer to BalancePoint™ Flyware Accessory Guide for complete listing)	Rigging kits include: BFR22: BalancePoint™ Fly Rails; IAF40: Isometric Array Frame; HAB: Sub/Dual 2-Way Horiz. Array; HVS: Multiple Horiz./ Vert. Array Kits with Sub Behind Array Options; DFS: Downfill Splay Kit; IUB0002WRG: Reinforced 304SS U-Bracket (WR models only)			
Configure-to-Order (CTO)	Custom color, Custom cable lengths on outdoor version			

Biamp strives to improve its products on a continual basis. Specifications are therefore subject to change without notice.

#### NOTES

- PERFORMANCE SPECIFICATIONS All measurements are taken indoor using a time-windowed and processed to eliminate room effects, approximating an anechoic environment, a distance of 6.0 m. All acoustic specifications are rounded to the nearest whole number. An external DSP with settings provided by Community Professional Loudspeakers is required to achieve the specified performance; further performance gains can be realized using Community's dSPEC226 loudspeaker processor with FIR power response optimization.
- 2. OPERATING RANGE The frequency range in which the axial processed response remains within 10dB of the average SPL.
- 3. CONTINUOUS POWER HANDLING Maximum continuous input voltage (and the equivalent power rating, in watts, at the stated nominal impedance) that the system can withstand, without damage, for a period of 2 hours using an EIA-426-B defined spectrum; with recommended signal processing and protection filters.
- 4. NOMINAL SENSITIVITY Averaged SPL over the operating range with an input voltage that would produce 1 Watt at the nominal impedance and the averaged SPL over the operating range with an input voltage of 2.83 Volts, respectively; swept sine wave axial measurements with no external processing applied in whole space, except where indicated.
- NOMINAL MAXIMUM SPL Calculated based on nominal / peak power handling, respectively, and nominal sensitivity; exclusive of power compression.
- 6. EQUALIZED SENSITIVITY The respective SPL levels produced when an EIA-426-B signal is applied to an equalized loudspeaker system at a level which produces a total power of 1 Watt , in sum, to the loudspeaker subsections and at a level which produces a total voltage, in sum, of 2.83 volts to the loudspeaker subsections, respectively; each referenced to a distance of 1 meter.
- 7. EQUALIZED MAXIMUM SPL The SPL produced when an EIA-426-B signal is applied to an equalized loudspeaker system, at a level which drives at least one subsection to its rated continuous input voltage limit, referenced to a distance of 1 meter. The peak SPL represents the 2:1 (6dB) crest factor of the EIA-426-B test signal.

- AXIAL PROCESSED RESPONSE The axial magnitude response of the complete loudspeaker system and each pass band capable of being driven by an independent amplification channel with recommended signal processing applied. 1/6 octave smoothing applied.
- AXIAL SENSITIVITY The SPL plotted against frequency, in all operating modes and for each pass band capable of being driven by an independent amplification channel, for a 1 Watt swept sine wave, referenced to 1 meter with no signal processing. 1/6 octave smoothing applied.

Data presented on this spec sheet represents a selection of the basic performance specifications for the model. These specifications are intended to allow the user to perform a fair, straightforward evaluation and comparison with other loudspeaker spec sheets. For a detailed analysis of this loudspeaker's performance, please download the GLL file and/or the CLF file from our website: biamp.com.

**CAUTION:** Installation of loudspeakers should only be performed by trained and qualified personnel. It is strongly recommended that a licensed and certified professional structural engineer approve the mounting design.
