Community L SERIES Beamforming Venue Horn™

LVH-909/AP

90° HORIZONTAL DISPERSION, ACTIVE PLUS, 20°, 80°, 100° VERTICAL DISPERSION, ARRAYABLE, HIGH OUTPUT LOUDSPEAKER

APPLICATIONS

Stadiums · Houses of Worship · Arenas Theaters · Ice Rinks · Auditoriums Large Multipurpose Outdoor and Indoor Venues

DESCRIPTION

Biamp's Community L SERIES LVH-900/AP Beamforming Venue Horn, combined with the Community Amplified Loudspeaker Controllers (ALCs), precisely tailors the directivity of each loudspeaker, or array of loudspeakers, to meet the sound requirements in any application.

Designed for exceptional performance in large venues, each 90* Active Plus array consists of two LVH-909/AP loudspeakers with a total of eight 12-inch LF drivers, six Community M200 midrange compression drivers and eight 1.5-inch HF compression drivers.

Using patent pending techniques, the triaxial drivers in each cabinet are integrated to create half of the desired vertical coverage pattern. Using advanced FIR techniques, the output from the two loudspeakers are seamlessly integrated into one coherent wavefront filling the entire 72 x 31-inch face of the array, providing pattern control to below 200 Hz. An LVH-909/AP array offers 90 degrees of fixed horizontal dispersion, three presets for vertical dispersion beamforming and has specialized input panels for dual cabinet long-throw configurations. The LVH-900 Active-Plus (AP) models allow DSP settings and control of individual drivers to provide uniform sound to the audience areas.

Typical applications include music and speech reinforcement for large houses of worship, stadiums, theatres, and much more. Possessing advanced features, highly-focused dispersion patterns, weather-resistant construction, and most importantly sonic excellence, LVH-900 loudspeakers make installations not only fast and simple, but as functionally effective as possible.

FEATURES

- Designed with individual driver control for extraordinary performance in large venues
- · Large format, horn-loaded triaxial array maintains pattern control to 200 Hz
- Maximize long-throw SPL level or extend vertical coverage pattern
- · Colinear manifold for HF and MF beamforming
- Indoor or Outdoor weather-resistant models
- EN54-24 and ISO 7240-24 certification

TECHNICAL SPECIFICATIONS¹

| Operating Mode | Multi-Amplifier with FIR DSP Beamforming | | | |
|---|--|---|---|--|
| Operating Environment | Indoor or Outdoor Direct Exposure | | | |
| Operating Range (-10dB) ² | 48 Hz to 20 kHz | | | |
| Nominal Beamwidth | Horizontal: 90° Vertical: 100°, 80°, 20° Symmetrical (user selectable presets) | | | |
| Transducers | LF: 4 x 12" (300 mm) with 3" (75 mm) CCAW voice coil, inherently weather-resistant cone in cast aluminum chassis MF: 3 x M200, 2" (51 mm) exit, ketone polymer diaphragm, compression driver HF: 4 x 1.5" (38 mm) CCAW voice coil, 1" (25 mm) exit, ketone polymer diaphragm, compact neodymium compression driver | | | |
| Nominal Continuous Power Handling ³ | LF1, LF2, LF3, LF4 (each) MF 1, MF2, MF3 (each) HF 1, HF2, HF3, HF4 (each) | | 87 V (950 W, 8 Ω) 26 V (130 W, 5 Ω) 23 V, (65 W, 8 Ω) | |
| Nominal Maximum SPL (Processed) ⁴ | 20° pattern | 139dB continuous | 145dB peak | |
| | 80° pattern | 134dB continuous | 140dB peak | |
| | 100° pattern | 134dB continuous | 140dB peak | |
| Rated Continuous Voltage⁵ | LF MF HF | 50.1 V (34 dBV) 20.0 V (26 dBV) 15.8 V (24 dBV) | BV) | |
| D . 114 | 20° pattern | 136 dB continuous | 148dB peak | |
| Rated Maximum SPL (Processed) ⁶ | 80° pattern | 132dB continuous | 144dB peak | |
| (Flocessed) | 100° pattern | 131dB continuous | 143dB peak | |
| Recommended Amplifiers | LF: 4 Channels (2) ALC-1604D (Bridge Mode) MF & HF: 7 Channels (2) ALC-404D | | | |
| Crossover Frequencies | 530 Hz, 1.84 kHz | | | |

PHYSICAL

| Input Connection | Lever-actuated wire clamping 4, 6 and 8-position terminal blocks | |
|-----------------------|---|--|
| Mounting Points | (24) M10 rigging inserts per cabinet | |
| Operation Environment | Indoor and Outdoor Outdoor: IP56 per IEC 60529 when used with the input panel and seal cup cover plates; Weather resistant to IEC 60068-2-1 Cold, IEC 60068-2-2 Dry Heat, IEC 60068-2-6 Vibration, IEC 60068-2-30 Damp Heat, cyclic, IEC 60068-2-42 SO2, and IEC 60068-2-78 Damp Heat, steady state | |
| Dimensions H x W x D | 948 mm x 797 mm x 775 mm (37.3" x 31.4" x 30.5") | |
| Weight | 113.4 kg (250 lbs) Indoor model 95.3 kg (210 lbs) Outdoor weather-resistant model | |
| Finish | Refer to the Technical Drawing (page 5) | |

OPTIONS

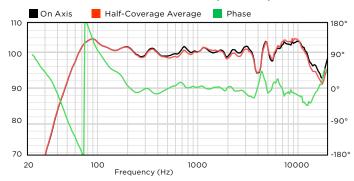

| Accessories (full list on page 6) | Splay Bracket: LVH-900SP1 Type 1; LVH-900SP2 Type 2 |
|--------------------------------------|---|
| | Indoor Frames: LVH-900AF Array frame; LVH-900PB Pull-back |
| | 3rd party rigging: Indoor & outdoor |

NOTES

- 1. TECHNICAL SPECIFICATIONS All measurements are performed using a time-windowed impulse response to eliminate reflections, approximating an anechoic environment, at a distance of at least 6.0 m. All acoustic specifications are rounded to the nearest whole number. An external DSP using settings provided by Biamp is required to achieve the specified performance; further performance gains can be realized using the FIR loudspeaker optimization presets available in Biamp's Community Amplified Loudspeaker Controllers (ALCs).
- 2. OPERATING RANGE The frequency range over which the on-axis equalized/processed response remains within 10 dB of the rated sensitivity, in accordance with IEC 60268-5.
- 3. NOMINAL CONTINUOUS POWER HANDLING
 The maximum continuous input voltage at the
 stated nominal impedance that the system can
 withstand for a period of 2 hours using an IEC
 60268-5 defined spectrum with recommended
 signal processing and protection filters.
- 4. NOMINAL MAXIMUM SPL The SPL produced when an IEC 60268-5 signal is applied to the equalized/processed loudspeaker system, at a level which drives at least one subsection to its nominal continuous voltage limit. Referenced to a distance of 1 meter. The peak SPL represents the 2:1 (6 dB) crest factor of the IEC 60268-5 test signal.

- 5. RATED CONTINUOUS VOLTAGE The maximum continuous input voltage for the system that results in no more than a 3 dB change in the system's response during operation.
- 6. RATED MAXIMUM SPL The SPL produced when a typical program material signal is applied to the equalized/processed loudspeaker system, at a level which drives at least one subsection to its rated continuous voltage limit. Referenced to a distance of 1 meter. The peak SPL represents the 4:1 (12 dB) crest factor of the program signal.
- 7. AXIAL PROCESSED SENSITIVITY The variation in acoustic output level with frequency for a 2.83 V, swept-sine signal using the recommended signal processing. Referenced to 1 meter. The on-axis magnitude and phase responses, as well as the average magnitude response, calculated over one-half of the nominal coverage angles, are shown. The responses have 1/6 octave smoothing applied.
- 8. HORIZONTAL/VERTICAL OFF-AXIS RESPONSES
 The loudspeaker's magnitude response at various
 off-axis angles using the recommended signal
 processing in the operating mode which utilizes the
 largest number of individually amplified pass bands
 The responses have 1/3 octave smoothing applied.

- 9. DIRECTIVITY INDEX The ratio of the on-axis SPL to the mean SPL at the same distance for all points within the measurement sphere for each given frequency; expressed in dB. The responses have 1/3 octave smoothing applied.
- 10. BEAMWIDTH The included angle between the -6 dB points in the polar response of the loudspeaker when driven in the operating mode which utilizes the largest number of individually amplified pass bands. The responses have 1/3 octave smoothing applied.

Data presented on this spec sheet represents a selection of the basic performance specifications for the model. These specifications are intended to allow the user to perform a fair, straightforward evaluation and comparison with other loudspeaker spec sheets. For a detailed analysis of this loudspeaker's performance, please download the GLL file and/or the CLF file from our website: (LVH-900_GLL)

CAUTION: Installation of loudspeakers should only be performed by trained and qualified personnel. It is strongly recommended that a licensed and certified professional structural engineer approve the mounting design.
